CHAPTER ONE

THE MAKING OF HISTORY:
HERODOTUS’ HISTORIÈS APODEXIS

Egbert J. Bakker

Action, in so far as it engages in founding and preserving political bodies, creates the condition for remembrance, that is, for history.

Hannah Arend, The Human Condition

Most readers of Herodotus’ work call it History, or the Histories. The name is doubly motivated. Not only does it follow Herodotus himself in the way in which he refers to his own literary and intellectual achievement; it also views Herodotus through the tradition of which we have made him the ‘father’. As the term historia (or historiè as Herodotus would have pronounced it) comes closer to us on its long way from the fifth century BCE through Greek Antiquity, it becomes more and more closely associated with writing, as appears from its joining with the verbal root graph, to form such composite concepts as historiographos or historiographia. Such ‘writing of history’, however, is quite alien to Herodotus’ understanding of historiè. ‘History’ for him is not an object of study, something you write, or write about; it is an intellectual tool and a communicative activity. The essential link for him is not with graph but with another verbal idea, as appears from the most famous mention of historiè in history, in the Proem to Herodotus’ Histories:¹

¹ Ηροδότου Ἀλκαρνησσίου ιστορίας ἀποδεξὶς ἢδε, ὡς μὴν τὰ γενόμενα ἐξ ἀνθρώπων τῷ χρόνῳ ἔξιτηλα γένησαι, μὴν ἔργα μεγάλα τε καὶ θομαστά, τὸ μὲν Ἐλλησι, τὰ δὲ βαρβάρους ἀποδεξῆς ἐκλείπει, ἀκλείπτα γένησαι, τὰ τε ἄλλα καὶ δὴ ἡ αὐτὴ ἐπολέμησαν ἀλλήλοισι.

This is the apodeixis of the historiè of Herodotus of Halicarnassus, put forth to prevent what has been made to happen by men from fading

¹ Translations of passages from Herodotus in this chapter are my own.
with time, and (to prevent) great and marvellous deeds, some accomplished by Greeks, others by barbarians, from losing fame, and in particular through what aitē they came to war with each other.

There are blanks left in the translation: this chapter, in dealing with Herodotus' historē as the prehistory of our notion of 'history', does not want to take too much for granted. So we will make the meaning not only of historē, but also of apodexis, the object of investigation. The latter term is the action noun of the verbal idea apo-deik, which will concern us in particular. Our main source of information will be the evidence that Herodotus' Histories provides itself as it has come down to us through the ages. And the first evidence we have to face is the interpretation of the Proem as the primary context of historēs apodexis.

Herodotus' first sentence, to begin with, seems to lack precision in the way in which it delimits the work's subject. While Thucydides tells us exactly that his subject is the Peloponnesian War, and that he started working on it from its very beginning, Herodotus does not tell us that the subject of his work is the Persian Wars. What he indicates is at the same time much broader than that subject—erga megalâ 'great accomplishments', for example, can be understood as including 'monuments', 'architectural achievements'—and narrower: according to the wording of the Proem, his historē will concern not so much the war itself as its aitē, another term, usually translated as 'cause', whose interpretation is at stake.

Nor does the narrative itself seem to do much to remedy the problem. Its long 'digressions' and varied subject matter have prompted various hypotheses concerning the unity and publication of the work, each betraying in its own way the preconceptions of the time. The lack of a clear focus on a well-defined subject has been explained as due to generic factors. The work as we have it was seen as showing signs of an intellectual development by which Herodotus passed through various stages, from the travelling geographer and ethnographer who wrote the Egyptian logos that is now our Book Two, to the historian who left us Books Seven through Nine, and who, it was thought, had made much progress toward the Thucydidean ideal of the objective historian. The tension between history and geography, between the prehistory of the work itself and the historical development of the concept of 'history'—

This 'analytic' standpoint, as it is sometimes called, is a 'unitarian' one. The question, 'Is Herodotus' work as history part of the historiography of the Historia? The ensuing answer was necessary to depict Herodotus' work as 'not yet' capable of receiving the status of normal for historiography as itself the kind of limited, partial, and metaphorical variant of this concept of those things, but which we have chosen to accept as a paratactic way of expressing the 'archaic style' and the 'oral' character of some modern notion of 'History' as forms only in the course of time, in quite, in some way or another, Herodotus being the first. Thucydides has been seen as the first in the most recent sense: the more we have come to be chastened by the changes that emerge is viewed in light of the changed notion of 'history'—

Formara (1971a); an earlier study, Hommel (1981).

E.g., Regenbogen (1968); Drexler (1972). For the prehistory, see Lang (1984); see also Evans (1991) 3, Thucydides' 'reliability' as discussed by

Latte (1958) 7 ('Er hat nicht als Historiker begonnen, sondern ist es geworden');
raphy, between the present and the past, was resolved through the history of the work itself.

This ‘analytic’ standpoint provoked, on the analogy of the Homeric Question, a ‘Unitarian’ reaction on the part of scholars who viewed Herodotus’ work as historical *ab ovo*: for them, geography and ethnography are part of the overall historiographical conception of the *Histories.* The ensuing ‘unity’ was not unproblematic, and often it was necessary to depict Herodotus as somehow incapable, or, rather, ‘not yet’ capable of making the distinctions and decisions that are normal for historiography as we understand it, or to impose on himself the kind of limitations we associate with purposeful writing. A variant version of this idea presents us a Herodotus who is capable of those things, but who is hampered by the constraints of an ‘archaic’, paratactic way of expression (Immerwahr (1966) 7). In more recent times, ‘archaic style’ and its associated concepts has come to be replaced by ‘orality’, and the supposed lack of focus in Herodotus’ choice of subject matter is seen as simply due to the fact that the intellectual context in which he wrote was ‘prediscliplinary’, unfamiliar with the modern boundaries between geography, anthropology, and history.  

In all these cases, the implicit question seems to be whether Herodotus was the first historian, a good or bad historian, merely a historian *avant la lettre*, or a historian at all. Herodotus is set against some modern notion of ‘history’, a norm to which he either conforms only in the course of his intellectual development, or not (yet) quite, in some way or another. In part, the modern reception of Herodotus has been the search for attenuating circumstances. It is only in the most recent research that the terms ‘historian’ or ‘history’ have come to be charged with cultural weight. The Herodotus that emerges is viewed in a way that entirely suppresses any modern notion of ‘history’—not without new controversy, as we shall  

Fornara (1971a); an analytic reading of Herodotus’ first sentence itself is offered in Hommel (1981).

1 E.g., Regenbogen (1930b); Pohlenz (1937), Immerwahr (1966), Cober (1971), Drexler (1972). For the problem of unity in the *Histories*, see de Jong, this volume (Ch. 11).

2 E.g., Lang (1984); on ‘oral strategies’ in Herodotus, see also Slings, this volume (Ch. 3).

3 Evans (1991); 3, Thomas (2000) 161 ff. See also the problem of Herodotus’ ‘reliability’ as discussed by Cartledge and Greenwood in this volume (Ch. 13).
Interpreting the Proem

Any attempt to understand Herodotus’ notion of ‘history’ must start from Herodotus’ own use of the term historie in the Proem, to which we now return. At stake is not only the term’s lexical value, but also the way it functions in the syntax of the Proem. This rich sentence is best taken as a tripartite structure, beginning with a phrase characterizing the work as a whole, and inscribing the name of its author in it (1), followed by two negative purpose clauses of parallel structure in which the work’s intended achievements are specified (2a and b), and rounded off with an indirect question that has at first sight an unclear relation to what precedes (3). Following the analysis of Tilman Krischer, we can present the construction as follows:6

1. Ἡροδότου Ἀλκικαρνησσέως ἱστορίης ἄποδεξὶς ἦδε,

2. α) μήτε (α) τὰ γενόμενα
   (β) ἐὰν ἄνθρώπων
   (γ) τῷ χρόνῳ ἐξίστηλα γένηται,
   
   β) μήτε (α) ἔργα μεγάλα τε καὶ θωμαστά,
   (β) τὰ μὲν Ἑλληνὶ, τὰ δὲ βαρβάρους
   ἄποδεξθέντα,
   (γ) ἀκλεῖα γένηται,

3. τὰ τε ἄλλα καὶ δι ἣν αἰτίην ἐπολέμησαν ἄλληλοισι.

Krischer has pointed out that the problematic final colon (3) is best explained when we assume that Herodotus’ proem is modelled in its syntactic articulation on a typical epic Proem. The last clause, 3 in the presentation above, reaches back to the first clause, thus complementing it and ensuring the coherence of the Proem.7 Furthermore,

---

6 Krischer (1965) 159-60; cf. Nagy (1990) 217, the latter analysing colon 3 as an indirect question; cf. Erbse (1956) 215, who analyses it as a relative clause (see also Lang (1987) 208); critical grammatical discussion in Drexler (1972) 3-11. A different articulation of the sentence is presented in Hommel (1981) 277 ff. Erbse (1992) 123-5 reviews the scholarship on the Proem, rightly pointing out that any attempt to see the Proem as announcing the content of the Histories is likely to create confusion.

7 Compare the proem of the Iliad, where 1. 6 ἐὰν δὴ τὰ πρῶτα δισσαλίην ἐρώσαντε ‘from the moment at which they stood apart in quarrel’ picks up μὴν ἄσθενε, θεός of the first line. See Krischer (1965) 162; Nagy (1990) 220 1 n. 34; on Homer specifically, see Bakker (1997c) 293. Krischer notes that the indication of Herodotus’ name and the characterization of the Muse(s) ιστορίην and the Muses, see of Herodotus’ syntax in H of the final colon as a later addition to the Proem reflect the new development.

---

8 Krischer (1965) 160, parallel is the proem of the Iliad, of them stood away from 'in quarrel' (8) in the beginning.

9 For a different interpretation, see Wees, this volume (Ch. 14. 1)
just as in epic, the final clause of the proem provides the link with the beginning of the narrative proper: it contains the word aitien ‘cause’, which is picked up in the first sentence beyond the proem in the form of aiton ‘guilty’, ‘responsible’:36

Περσόν μέν νυν οἱ λόγοι Φοίνικως αἰτίους φασὶ γενέσθαι τῆς διαφορῆς·
(1.1.1)

Now the chroniclers of the Persians claim that the Phoenicians have been responsible for the conflict (lit. ‘difference’).

Beyond syntax and stylistics, the important semantic and conceptual consequence of Krischer’s analysis is that the semantic nuclei of the first and last clause, historiē apodexis and aitien, are connected with each other: Herodotus’ project is the historiē of an aitien, whatever sense we will attribute to these terms in the final analysis.3 A further Homeric echo can be detected in the cola (α) and (γ) of 2b: great deeds and their connection with kleos. This important detail will concern us later on.

But if the Homeric reminiscence is unmistakable, so is the parallel with more contemporary stylistics. The two purpose clauses in the middle (2a–b), with their symmetrical internal structure (isocolon) and their identical closing sounds (homoioteleuton), conform to the style that had become popular in sophistic contemporary rhetoric, mainly due to the Sicilian orator Gorgias.10

Herodotus’ Proem, then, displays a curious mixture of old and new. We may ask whether this co-existence of epic and sophistic elements is confined to stylistics or extends into thought and mentalité as well. The latter possibility is rejected by Krischer (1965: 163),

name and the characterization of his work functionally occupies the slot of the invocation of the Muse(s) in the traditional epic proem (on the relation between ἱστορία and the Muses, see pages 27–28 below). Doubts as to the epic connotations of Herodotus’ syntax in Hommel (1981: 281 n. 44, who analyses (pp. 284–7) the final colon as a later addition, an editorial intervention on Herodotus’ part to make the Proem reflect the new historical turn the work has taken in the course of its development.

3 Krischer (1965) 160, Nagy (1987) 180; cf. Lateiner (1989) 15. The first epic parallel is the proem of the Iliad, in which the phrase διότι τινι ἐρπασίν ‘the two of them stood away from each other quarrelling’ in line 6 is picked up by ἔρπα in ‘in quarrel’ (8) in the beginning of the narrative.

9 For a different interpretation of the Proem, and of aitien in particular, see van Wees, this volume (Ch. 14) p. 321.

10 Kennedy (1963) 64–5; on the influence of sophistic rhetoric on Herodotus’ style, see Jacoby (1913) 333; Aly (1921) 286 96; general remarks in Lateiner (1989) 19.
who holds that the epic parallel testifies to Herodotus’ acknowledging epic as a stylistic and literary model, not his continuing the Hymnatic tradition of conferring kloeo to the heroes of the past. Yet the position of Herodotus between the poetic tradition of the past and the intellectual developments of the present is by no means clear. In particular the meaning of the crucial phrase historíes apodeikití has recently become the center of a controversy that fully confirms Herodotus’ enigmatic status.

Historíes apodeikití is usually rendered with such expressions as ‘publication of research’ or ‘public exposition of an inquiry’. It remains to be seen, however, whether these translations are of much help. ‘Publication’ is no less a culturally determined concept than is ‘history’ or ‘research’, and we may ask what it might have meant for Herodotus’ work to have been ‘published’ in its original intellectual context. The notion of publication, in fact, becomes increasingly important in recent research, suggesting that the old controversy between the analytic and the unitarian approach has never been really resolved. Exactly what is being ‘published’ according to this phrase: an ethnographical core or the work as we have it? And what does ‘published’ mean? Does apodeikití apply to the work as a whole or to the oral delivery of its parts? Some scholars have recently endorsed the latter possibility, arguing that ‘publication’ is an anachronistic concept that does not capture the reality of the reception of Herodotus’ Inquiry by its original public. Rather, they argue, we must think of ‘prepublication’ of ‘work in progress’ in the form of lectures.

The idea of Herodotus presenting his work orally, for which there

---

11 E.g., ‘performance [literally, ‘display’] of the enquiries’ (Gould (1989) 17); ‘demonstration of his research’ (Lateiner (1989) 7); ‘public presentation’ (Nagy (1990) 217); ‘exposer son enquête’ (Payen (1997) 82). *Apodeiktí*, the Ionic form for *apodeikno*, is just as *apodeiktí* (*apodeikno*) a *nomos* action derived from the verbal root *deirí* ‘show’, ‘display’, ‘point’. In Herodotus’ Ionic, another verbal root, *dikí* (for Attic *dikí*) ‘receive’, ‘accept’, yields in principle the same form (cf. *dikí* (Hdt. 7.3.3)); *aoríst* forms of either verb are also identical: *apodeiktí* from (*apodeiktí*) and *dikí* from (*dikí*). Some scholars (most recently Rosén (1993)) actually go so far as to view *apodeiktí* as a form of *apodeiktí* which would turn Herodotus into a receiver of established tradition, rather than one who expounds original, individual research. See Erbe’s (1995) reaction. Nagy (1987) 176 n. 3 speaks of a ‘confabulation’ of the two verbs. See also the comments by Lang (1987) 203 and Nagy’s reply (1987) 209.

is some ancient anecdotal particular by Rosalind T. as a work in the world of the mode of presentation of the corpus. Herodotus’ work displays the same age signals in the early inquisitions at which know.

Thomas’ notion of oral presentation and the existence of written account, this term of what was already in written. This idea of *apodeiktí*, which she is of the sophistic and ref. of the emphatic assertion conducted in competitions in Hippocratic corpus of the point of view.

Eisí tincs eí tékhn eírís sýnta tóto diásekríseis kai poíémenei. (Hipp.

Some there are who, they consider, not but that they are

For Thomas, the paradigmatic Herodotus’ own *historíes* that Herodotus’ opening within the contemporaneous ideas of proof an into display, and then in his very first sentence.

14 Thomas (1993); (2000).

15 Colley (1991) 89.

16 Tr. Jones (1923) 191.
is some ancient anecdotal evidence, has been entertained in particular by Rosalind Thomas, who has sought to locate Herodotus’ work in the world of early scientific discourse as is evidenced by the mode of presentation of many of the treatises in the Hippocratic corpus. Herodotus’ work, especially the Egyptian logos, she argues, displays the same agonistic and combative tone that G. E. R. Lloyd signals in the early Hippocratic writers and that must go back to sessions at which knowledge was transmitted, and contested, orally.

Thomas’ notion of the publication of Herodean historiē envisages oral presentation and reception of ideas, while explicitly allowing for the existence of written texts. Such a blend of the spoken and the written is the realm of rhetorical epideixis. According to a recent account, this term denotes ‘the displaying or revealing (orally) of what was already in existence beforehand’—that is, the discourse written. This idea of ‘display’ is for Thomas very close to Herodotus’ apodeixiōsis, which she conceives of as the kind of proof characteristic of the sophistic and rhetorical milieu of the end of the fifth century: the emphatic assertion and demonstration of one’s own historiē ‘research’ conducted in competition with others. One of the treatises in the Hippocratic corpus opens in fact in a particularly suggestive way from the point of view of Herodotus’ Proem:

Εἰς τίνες οὖν τέχνην πεποίηται τὸ τάς τέχνας αἰσχροεπεῖν, ὡς μὲν οὖν οἱ τούτο διακρισισθέντες, ἡς ἐγὼ λέγω, ἀλλ’ ἱστορίας οἰκεῖς ἐπιδείξιν ποιώμενοι. (Hipp. De arte 1)

Some there are who have made an art of vilifying the arts, though they consider, not that they are accomplishing the object I mention, but that they are making a display of their own knowledge.

For Thomas, the parallelism between historiēs ... epideixin here and Herodotus’ own historiēs apodeixis ‘provides the most vivid suggestion that Herodotus’ opening sentence had contemporary connotations within the contemporary quest for knowledge. It also implies that the ideas of proof and demonstration might rapidly imply or shade into display, and then into the display lecture. Herodotus seems then, in his very first sentence, to be using the fashionable language of

---

15 Cole (1991) 89.
16 Tr. Jones (1923) 191.
the time, language which had precise connotations in a period where, increasingly, any display of erudition and knowledge could be made in an oral presentation, an *epideixis*.\(^{17}\)

It remains to be seen, however, whether the preverbs *apo-* and *epi-* are so easily interchangeable; but before we turn to that question, we need to address an alternative modern approach, rejected by Thomas, which seeks to situate Herodotus' project, not in contemporary scientific thought, but within the perspective of the general Greek preoccupation with the past. Herodotus in this perspective, put forward by Gregory Nagy in particular, is not so much a scientist as a poet, a master of prose narrative, whose function it is, along with the *aidos*, the epic poet, to confer *klesos*. Nagy characterizes Herodotus' work as 'the product of conventions in an oral tradition of prose'.\(^{18}\) In this account, *apodexis* is not 'proof' or 'display', nor a one-time event, a display lecture or *epideixis*, but a 'public presentation', a performance, a link in a chain of transmission starting with the events in the past and ending with the public exposition of Herodotus' *historia*.

The Proem, in fact, invites us to pay more attention to Herodotus' interest in the past than Thomas would allow. There is a concern with *klesos*, expressed in the two parallel negative purpose clauses, whether or not we consider that concern to be epic in mentality. The second of those two clauses (2b, β), furthermore, contains a second occurrence of the verbal idea *apo-deikn*. The crucial attribute of the 'great and wondrous deeds of Greeks and barbarians', whose *klesos* should not be lost, is that they are *apodekhthenta*, which Nagy translates as 'performed'.\(^{19}\) For Nagy, there is a relation between the achievements of the past and Herodotus' *apodexis* in the present: 'performing a deed is the equivalence of publicly displaying a deed because it is ultimately being publicly displayed by the *History* of Herodotus'.\(^{20}\) *Apodexis*, then, according to Nagy, is the proclamation of *klesos* in an ongoing oral tradition, as against the insistence on proof, display, and perhaps an account of the term.

Herodotus could have had other directions. Against Thomas in contemporary intellectual circles, a prose storyteller who values the term *apodexis* is crucially, and for Herodotus, perhaps more so, 'public performance', both positions leading to a more integrative 'proof' in the present of the past.

Yet in spite of the success of Nagy's positions there is still a sense of the oral delivery of *Herodotus* alone among modern authors, the composition, public in times other than or in addition to prose works of Herodotus, being a truism. True, more specific and the more than the case of *Thucydides*, Herodotus' own the grammatical first person, and messages, but not in the case of *Thucydides*, and it is a constant concern for the present, both in sections, and on numerous precedents, using the 're-

\(^{18}\) Nagy (1987) 175; (1990) 224, arguing on the basis of a parallelism of λόγος (glossed as 'masters of speech', *ibid.*, 223) and ἀπόδειξις. See also Hartog (1991) 285 (English tr. p. 276), referring to Havelock (1963) 53 4 n. 8.

\(^{19}\) Nagy (1987) 178.

---

21 E.g., Gould (1989) 17; the 'orality' of the term in Mon., in a discussion (including the oral philosophy) of basic, fundamental and persistent not only to the 'mentality' or the 'oral mode of presentation' (oral story). See, e.g., Pohlenz (1987) 200; the first-person narrative, who would think instead of *Thucydides*, however, may be less straightforward. For Bakker (1997a). Against Thuc. son in the *Historia*, see Stylopoulos, and Herodotus and other histo.
proof, display, and personal achievement that is inherent in Thomas’ account of the term.

Herodotus could hardly have been pulled in two more different directions. Against Thomas’ modern scientific Herodotus, firmly rooted in contemporary intellectual debate, we have Nagy’s conception of a prose storyteller who subsumes the preceding epic tradition. The term *apodexis* is crucial for either position, but neither ‘proof/display’ nor ‘public performance’ exhausts its semantics, as we will see. In fact, both positions leave aspects of the term unexplored that make possible a more integrative interpretation, yielding a Herodotus whose ‘proof’ in the present, is not incompatible with his rendering of the past.

Yet in spite of the apparent difference between Thomas’ and Nagy’s positions there is agreement in that both take *apodexis* to refer to the oral delivery of Herodotus’ work, and in this they are not alone among modern authors. As we begin to understand more of the composition, publication, reception, and transmission of discourses in times other than our own, to say that there is an ‘oral’ component to prose works of the fifth and fourth centuries comes close to being a truism. True, for Herodotus’ work in particular we can be more specific and the case for at least an oral reception is easier than in the case of Thucydides or Xenophon. As Thomas notes herself, Herodotus’ own voice is abundantly present in the form of the grammatical first person, most often in the ethnographical passages, but not infrequently in the narrative sections as well. There is a constant concern with the marking of the beginning and end of sections, and on numerous occasions Herodotus refers back to what precedes, using the ‘real time’ temporal adverbs *proteron* ‘earlier’ and

---

21 E.g., Gould (1989) 17; Evans (1991) 3; Hartog (1991) 285; assessment of the ‘orality’ of the term in Moles (1999) sect. 8. It is worth pointing out that this whole discussion (including the controversy between Nagy and Thomas) suffers from a fundamental and persistent ambiguity in the use of the term ‘oral’, in that it refers both to the ‘mentality’ or ‘conception’ of a discourse (‘oral’ vs. ‘literate’) and to its mode of presentation (‘oral’ vs. ‘written’). For discussion, see Bakker (1999a) 29–37.

23 Thomas (1993) 240–1; Dewald (1987) 150 as well as Ch. 12 in this volume. Thomas uses the first-person verbs as an argument against the idea of the ‘oral storyteller’, who she thinks is much less present in the text. Signs of speaking in Homer, however, may be less straightforward, but they are unmistakable once noticed; see Bakker (1997a). Against Thomas’ and Dewald’s stance with regard to the first person in the *Histories*, see Screeuw (1993) 150, who approaches the first person in Herodotus and other historians as a necessary ‘fiction’.
histeron ‘later’, the same adverbs that are also used for the temporal relationships between the events recounted in the narrative.\textsuperscript{24} We are surely entitled to infer from these apparent attempts at monitoring the information flow that Herodotus is working hard, noticeably, to facilitate the reception of his work to a listening public.\textsuperscript{25}

But all this is not our point. The question is whether the idea of the oral delivery of ὁλογί ας is expressed as such by the noun apodeixis. Does Herodotus refer in the opening words of his work, to its oral delivery? Or if that work is, as an integrated whole, meant to be orally delivered after all, would not a reference to its own, oral, mode of presentation be redundant? If apodeixis merely refers to the medium of presentation, why is the term present at all, and did not Herodotus simply call his work ‘historiē’? The second occurrence of the verbal idea apodeik- in the proem may help us realize that there is more to apodeixis than what meets the eye at first sight, and that historiēs apodeixis is a phrase consisting of two key terms in Herodotus’ intellectual and conceptual vocabulary. It also invites us to study Herodotus’ own use of those terms in some detail, and to bring that internal evidence to bear on the interpretation of the proem. A survey of Herodotus’ own use of the nouns historiē and apodeixis and the verbs historein and apodexasthai reveals that historiēs apodeixis, far from being a mere title or a characterization of the ‘medial’ aspects of the work, is a bold, even provocative, expression stating nothing less than the communicative purpose and ambition of Herodotus’ work. What it says was apparently new and not obvious, and sufficiently marked for the subsequent historiographical tradition to avoid it studiously.\textsuperscript{26}

In the following sections, we will first deal with historiē and then with apodeixis; a picture will emerge in which these terms are not only two constituents of a famous κατά τοῦτο as we see, whose semantics, and not only two

\textsuperscript{24} On beginning and end of sections, see Immerwahr (1966) 52–8; Dewald (1987) 164–5. The importance of the particles μαθεῖ ἢ... δεῖ in this process is demonstrated in Bakker (1993): On pointing backward and ahead, see also de Jong, this volume (Ch. 11) pp. 259–263.

\textsuperscript{25} Three times a forward cross-reference remains unfulfilled. It is to be noted that in these cases Herodotus does not use ὄστερον (2.101.2, referring to 2.149.1), but an explicit mention of λόγοι (1.106.2 ἐν ἑτέροις λόγοις, on the fall of Nineveh, 1.184 ἐν τοιούτῳ λόγοις, on the Babylonian kings, 7.213 ἐν τοιούτῳ λόγοις, on the death of the traitor Ephialtes). Are these references to parts of the work that were never written or to lectures that were never incorporated in the final reduction? Cf. Nagy (1990) 235 n. 91. See also Rössler, this volume (Ch. 4, note 17) and Cobet (Ch. 17, note 40).

\textsuperscript{26} Hornblower (1987) 8–11. But see pages 31–32 at the end of this chapter.

\textsuperscript{28} Nagy (1990) 259–62.

\textsuperscript{29} E.g., De Cicco (1996) 645a8-12; 696b14-17.
constituents of a famous syntagm, but also two interrelated concepts, whose semantics, and pragmatics, blend to form a unified whole.

**Historiē: Interrogation and Difference**

The abstract noun *historiē* as well as the verb *historeō* are etymologically related to the verbal root *wōd-/*wōid-/*woīd-* ‘see’, ‘know’. This might yield the idea of gathering knowledge through actual perception, autopsy, as the central meaning of *historiē.*27 Such a meaning would seem to be in concordance with the idea of Herodotus the critical researcher that has recently been proposed by Thomas, as we saw. Her understanding of *historiē* presents us with a Herodotus who is not sifting traditions and probing the past, but investigating natural phenomena in the present, such as the nature of the mysterious Nile.28 Again we may contrast Thomas’ views with those of Nagy, who sees in *historiē* an essentially juridical concept: the investigation of the cause of the war between Greeks and barbarians.29 This highlights the relation between *historiē* and *aitē*, which, as we saw, is something the syntactic articulation of the Proem invites us to do.

This relation is, in fact, more significant than is commonly supposed, since Herodotus is not the only contemporary writer to present his *historiē* in this way. We can observe that in early medical and scientific writings there is a mutual expectancy between *historia* and *aitē*. The author of the Hippocratic treatise *On Ancient Medicine*, for example, states that knowledge about ‘nature’ (*phasis*) is impossible without knowledge of man, and that the latter involves ‘*historiē* to know (eidēnai) what man is and through what cause (αi tēn aitēn) he comes to be what he is’ (ch. 20). Similarly, Socrates in the *Phaedo* (96a) tells that in his youth he had a passion for ‘natural science’ (*peri phuseōs historian*) which he specifies as ‘knowing (eidēnai) the causes (aitēs) of each thing’. In the scientific treatises of Aristotle, especially those dealing with ‘natural history’, the connection between *historia* and *aitē* is also well attested.30 Apparently, *historiē* is

---

30 E.g., De Carlo 298b2; Hist. an. 491a11 12; Incessu an. 704b7 11; Part. an. 646a8 12; 696b14 17.
not for Herodotus alone the search for what ‘causes’ the subject of investigation.\footnote{On οἰκία in Hippocratic and other contemporary texts, see also Sauge (1992) 257 ff., who stresses, even for scientific texts, the link with οἰκίαν (δίκαιον) ‘demand satisfaction (from an accused party)’. See further below, p. 18.}

The difference between the natural historians and Herodotus the historian is that for the latter aitē is not a matter of nature or the human body but of human behaviour (we recall the ta genomena ex antrôpōn of the Poem). And so the ‘cause’ of the researcher’s object of study does take on the sense of ‘guilt’ or ‘responsibility’. In fact, the agent noun from which historīē morphologically derives, histōr (or istōr), is used in that very semantic sphere. The term does not occur in Herodotus, but is attested in archaic poetry and inscriptions in the sense of ‘judge’, ‘adjudicator’, or ‘witness (to an oath)’.\footnote{Attested usage of ιστόριον/ιστορόν: Il. 18.501, 23.486; Hes. Iliad 792; Soph. E. 850; Plat. Cret. 406b3; Hipp. Oath 2 (it is ironic that the term should be used in the Hippocratic oath in this juridical sense). See also Nagy (1990) 250–9. In Dewald (1987) 153 ff. the notion of histōr is used metaphorically, as a narratological function: the authorial persona of the Histories; cf. her more recent views in Ch. 12, pp. 271–2 below. See also Cartledge and Greenwood, this volume (Ch. 15 note 21).}

Even though Herodotus never uses the term, his work shows, as Robert Connor ([1993] 9) has noted, ‘a remarkable similarity to the way histōres functioned in early Greek society.’

Just as apodexis, then, historīē can and has been used to push Herodotus into two almost mutually exclusive directions: the search for a guilty, ‘responsible’ agent in the conflict between the Greeks and the barbarians, as Nagy would have it, and the critical geography and ethnography advocated by Thomas, notably in the Egyptian logos. For the assessment of the difference between the two positions it is relevant to observe that Thomas’ account obscures the fact that the direct object of Herodotus’ historīē of Egypt, both grammatically and notionally, is not the land or its mysterious river, but people interrogated, informants: it is the Egyptians themselves who tell Herodotus about the wonders of their land.\footnote{E.g., the investigation of the Nile: ιστορίαν οὖν οὗτος ἄνωθεν δύναμιν ἔχει ὁ Νεῖλος, 2.19.3; ἔλεγεν ... μα ... ιστορίαν, 2.113.1. Cf. already Pohl (1937) 44 (‘die eigentlich ιστορία, das Verhör von Augenzeugen, von dem, was nur durch Hörensagen überliefert ist’).}

This is not to deny that historīē in contemporary medical writing may pertain to the authority of the researcher having seen for himself, but from this it does not follow that Herodotus’ project is identical to the natural

and medical science of today, to allow for the possibility of historical terminology to establish his own; investigating and giving access to it, instead.

Herodotus often strayed conspicuously in his account of the Scythians, but the point of observation is not historīē but can actually be construed as a form of accounts (logoi) as historīē.

"Ἄλλον δε οὖν ὁμοφάσις μετὰ τοῦ ἐπιστήμου ἀπὸ τοῦτο ἀκοῇ ἡμῖν.

I have not been able to do much. I have further come myself as far as beyond that point πάντα γίνει.

Yet historīē is not merely a known passage, Herodotus with ἔπαινος ‘seeing’ and τὸν ἰστότητα ἐπιστήμου δὲ τοῦτον ἀκοῇ καί τίς ὁ ἤλθεν.

Mέχρι μὲν τοῦτον ὁμοφάσις δὲ ἀπὸ τοῦτο ἐπιστήμου

Up to that point my inquiry are at the best presenting Egyptian element of personal.

Historīē, then, seems to remain an instrument and making up for the notion of judgment and discretion of specially self-proving their view of the world connected with knowing seeing as source of knowledge.

\footnote{On this passage, see also Cartledge and Greenwood, this volume.}
and medical science of his day, as Thomas implies; rather, we have to allow for the possibility that Herodotus borrows contemporary terminology to establish the authority of an enterprise that is entirely his own: investigating the past, and scrutinizing the traditions that give access to it, instead of receiving and accepting them wholesale.

Herodotus often stresses his ‘having seen’, most frequently and conspicuously in his account of his researches of the Egyptians and the Scythians, but the proper term in his vocabulary for autopsy and observation is not historiē or its cognate expressions. That concept can actually be contrasted with autopsy, as a means to gain information through hearing:34

"Ἀλλάς δὲ οὐδὲν οὐδὲν ἡμῶν προθέσατι, ἀλλὰ τοσόνδε μὲν ἄλλο ἐπὶ μυκρότατον ἑπιθύμην, μέχρι μὲν Ἐλεφαντίνης πόλιος αὐτόπτης ἔλθων, τὸ δὲ ἀπὸ τοῦτον ἄκοι ἥδη ἱστορέων. (2.29.1)

I have not been able to learn anything from anyone else, but this much I have further been able to gather as far as I could, having come myself as far as the city of Elephantine as an eyewitness, and beyond that point making my researches through hearing.

Yet historiē is not merely a matter of listening either. In another well-known passage, Herodotus contrasts historiē as critical listening, along with ὄψις ‘seeing’ and γνώμη ‘opinion’, to the more passive reception of accounts (λόγοι) as he heard them:

Μέχρι μὲν τούτον ὄψις τὰ ἐμὴ καὶ γνώμη καὶ ἱστορίη ταύτα λέγουσα ἐστι, τὸ δὲ ἀπὸ τοῦτο Αἰγυπτίων ἔρχομαι λόγους ἐρέων κατὰ τὰ ἡκούντα προσέρχεται δὲ τι αὐτόσι καὶ τῆς ἐμῆς ὄψις. (2.99.1)

Up to that point my own observation as well as my judgment and my inquiry are at the basis of what is said, but from now on I will be presenting Egyptian accounts as I heard them; still, there will be an element of personal observation in it.

Historiē, then, seems to be looking through the eyes of one’s informants and making up for their imperfect point of view by the power of judgment and discrimination. Needless to say, historiē is the interrogation of specially selected informants, and aims at proving or disproving their view of the truth. The concept is therefore obviously connected with knowing, but it does not necessarily involve actual seeing as source of knowledge. For this reason, another etymology

---

34 On this passage, see also Sauge (1992) 252; on the next passage (2.99.1), see Cardew and Greenwood, this volume (Ch. 15), p. 355.
has recently been proposed by Edwin Floyd, who derives *historë* (and *histor* not from the root *w eid-* but from the verb *hizein* 'to scat'). This yields the idea of convening two or more parties and listening to what they have to say. This would certainly suit the earliest occurrence of *histor* at *Iliad* 18.501, in the description of the juridical scene on the Shield of Achilles, where the juridical sense of 'judge', 'arbiter' is particularly clear.

We do not have to decide whether or not the alternative etymology is linguistically correct to see that the semantic idea behind it provides a plausible interpretation of Herodotus' own conception of *historë*. The core of the concept is not so much seeing yourself as acquiring knowledge through the interrogation of others who have seen, and who therefore know, or claim they know. This applies to the characters in the narrative no less than to the narrator; they, too, may be interested in what is beyond perception, remote in space or time. Croesus the Lydian king, for example, 'inquired' (*historein*) which of the Greek states were the most powerful, and in doing so (*historein*) found out that the Lacedaemonians and the Athenians were dominant at the time (1.56.1–2). And the Egyptian priests claimed they had secure knowledge about Menelaus's stay in Egypt through their own 'investigations' (*historëisi*, 2.119.3).

The result of Croesus' and the Egyptian priests' investigations is self-evident and incontrovertible, as in the case of some of Herodotus' own researches. Concerning the question as to the real nature of Heracles, for example, Herodotus can report that 'the results of the investigation (*ta historëmena*) indicate clearly (*deoi saphiô*) that Heracles is an old god' (2.44.5). It remains, however, that *historë* is not first-degree, absolute knowledge based on perception, but relative knowledge, an approximation of the facts of the matter, based on a judicious assessment of the pretended first-hand knowledge of others. Sometimes Herodotus states explicitly that his inquiries have yielded only partial and limited results: 'so far as I have been able to reach in my investigation'. And the *logoi* resulting from an investigation may be

conflicting. There may be a reason for this in his discussion of

Πλήθος δὲ τὸ Σκυθός, 
διαφόρος λόγους περιέχοντο,

As for the multitude of anything about it without number.

Herodotus' *historë* may be applied to the subjects of scientific in the demography of Scythia, *historë* proceeds through a dialogue between the narrators and their informants.

*Historë*, as Herodotus points out, is a question to which there cannot always provide a coherent answer. The Proem to the *Histories* begins with the narrative linking the Proem to the *Histories*.

Since the Proem explicitly sets a time period for the *Histories*, it is safe to assume that the narrative begins with the beginning of the narrative. Even though there is no evidence to prove that this is the case, the conflict is a dead end, so it is for the sake of the meaning into the semantics, including the sentence of Herodotus to the

Περεξέαν μὲν νῦν οἱ λόγοι: 
(1.1.1)

Now the chronicles have been responsible for

The conflict between the two *logoi* and a *diaforë*, literally, a 'departure', the Persian *logoi* 'say'.

56 Floyd (1990) 161. Floyd bases his objections to the traditional etymology primarily on the rough breathing on *istop*, *istopía* (which is not easy to harmonize with the verbal root *éid-*). As Rosén (1993) 146 n. 1 points out, however, the collocation of the suffix *-tov* with a reduplicated present stem *éid-év* (<*r* *-ed>*) is not without problems either.

57 See 2.34.1 ἐπὶ ὁποιον μυκρότατον ἱστορέων τα ἐξείκεσθαι; 4.192.3 ἐπὶ ὁμοίως ἱστορέων τα καθιστάν ποιεῖ τὸ ἐκείπεσθαι.
conflicting. There may be ‘difference’ between them, as he informs us in his discussion of the number of Scythians:

Πλήθος δὲ τοῦ Σκύθων ὁ τὸ ἔγχυμνον ἀπεκέχος πυθέσθαι, ἀλλὰ διαφόρους λόγους περὶ τοῦ ἀριθμὸν ἕκαστον (4.81.1)

As for the multitude of the Scythians, I have not been able to learn anything about it with precision: I heard different versions about their number.

Herodotus’ historiē may aim, among other things, at knowledge about subjects of scientific interest, such as the sources of the Nile or the demography of Scythia, but its basic material is language, logoi. And historiē proceeds through judgment and discrimination, as an implicit dialogue between the opinions of the researcher and those of his informants.

Historiē, as Herodotus’ History implicitly informs us, is always a question to which the information solicited is a response; it therefore always provides a context for whatever the interrogated informant has to say. For an illustration of this idea, let us return to the beginning of the narrative. We saw already that the idea ait– (aitēn, aitious, ‘guilt(y)’, ‘responsibility/responsible’) serves as conjoining device linking the Proem to the narrative and setting the latter in motion. Since the Proem explicitly links historiē to the aitē of the war, we can safely assume that historiē is at work from the very start of the narrative. Even though the investigation into the mythical ‘cause’ of the conflict is a dead end for Herodotus himself, soon to be abandoned for more meaningful research, it does provide a basic insight into the semantics, indeed, pragmatics, of historiē. To repeat the first sentence of Herodotus’ account proper, as it emanates from the Proem:

Περάσων μὲν νυν οἱ Φοινικαῖοι αἴτιοι φασὶ γενέσθαι τῆς διαφορῆς· (1.1.1)

Now the chroniclers of the Persians claim that the Phoenicians have been responsible for the conflict (lit: ‘difference’).

The conflict between the Greeks and the Persians is reformulated as a diaphōrē, literally, a ‘difference’, ‘variance’. We can imagine what the Persian logoi ‘say’ (plaisin) as a response to a question of the

37 E.g., Dewald (1987); Connor (1993).
The verb used for demanding satisfaction from a ‘responsible’ party is the etymologically connected aitoi, which is used several times in the Persians’ account as it is rendered in Herodotus’ indirect discourse: the Colchian king sent heralds to Greece to ‘demand satisfaction (aiêuín dikas) for the rape of Medea and demand back (aiptaiēín) his daughter’ (1.2.3). A little later, both in mythical time and in Herodotus’ story time, the Greeks will do exactly the same for Helen in Troy. This mutual demanding of satisfaction does not stop with the earliest dealings between the Greeks and the barbarians; it continues into the histoiu of which Herodotus gives us here the results: the Persian logoi apparently speak in defence, claiming that in having launched a wholesale attack on Troy the Greeks are the real aitoi tês diaphorê̂s. The end of this imaginary ‘trial’ is well known. Herodotus leaves this inconclusive case for what it is and turns to the man whom he ‘knows’ (oida) to have started the hostilities against the Greeks (1.5.3). But meanwhile he has given logoi on the subject, and he has shown their difference.

The attempt to retrace the earliest aitê of the ‘difference’ between the Greeks and the barbarians points up a case of precisely what Herodotus’ work, as presented in the Proem, claims to be able to prevent: ‘things made to happen by men’ (genomena ex anthrōpōn) that have become ‘fading [or extinct] with time’, tòi khronoi exiēla. Yet the very impossibility of the recovery of these remote events reveals an essential aspect of Herodotus’ histoiu, its inherently dialogic nature. The search for the aitê of human behaviour generates new human behaviour in the form of language: opinions that answer the histoiu’s question, responding to each other, contradicting each other, either rejected or accepted by the discriminating investigator. Histoiu, in other words, takes the diaphorê ‘difference, conflict’ of the historical process to a new, so to speak, diaphorê between two

The beginning of the essential aspect of Herodotus’ famous points. ‘Let anyone who has read at 2.123.1, ‘do what I myself stick to the fact, write what I heard’ and enclosure is prompted by the war with Xerxes with this message’, he wrote. Argos went to Sousse to the point I cannot say with Greek opinion genēna... all one expressed by the argumented a few lines later.

Γενό δ’ ὡς ὀφειλω λέγειν
καὶ μου τοῦτο τ’ ἐπιφήμενον

I am bound to report not at all bound to the whole of my

In light of these statements, anthrōpōn from the Greek ‘things made to happen by men’ includes things said. The forum for the works of history is in the nature of the thing itself as the search for the aitê of Herodotus’ histoiu, in the context. In investigating becomes responsible for the way things become aitôs diaphorê in the next sections how a question between the res...
histor: ‘Who according to your national tradition are aitioi of the ‘difference’ between the Greeks and the Persians?’ Or even, in an imagined courtroom: ‘The Greeks consider you guilty of the diaphorê. What do you have to say in defence?’ The very state of being aitios, in fact, is the obligation to ‘respond’, as in English ‘responsible’.

The verb used for demanding satisfaction from a ‘responsible’ party is the etymologically connected aiteô, which is used several times in the Persians’ account as it is rendered in Herodotus’ indirect discourse: the Colchian king sent heralds to Greece to ‘demand satisfaction (aitein dikas) for the rape of Medea and demand back (ap-aitein) his daughter’ (1.2.3). A little later, both in mythical time and in Herodotus’ story time, the Greeks will do exactly the same for Helen in Troy.30 This mutual demanding of satisfaction does not stop with the earliest dealings between the Greeks and the barbarians; it continues into the historiê of which Herodotus gives us here the results: the Persian logosoi apparently speak in defence, claiming that in having launched a wholesale attack on Troy the Greeks are the real aitoi tês diaphorês. The end of this imaginary ‘trial’ is well known. Herodotus leaves this inconclusive case for what it is and turns to the man whom he ‘knows’ (oida) to have started the hostilities against the Greeks (1.5.3). But meanwhile he has given logos on the subject, and he has shown their difference.

The attempt to retrace the earliest aitio for the ‘difference’ between the Greeks and the barbarians points up a case of precisely what Herodotus’ work, as presented in the Proem, claims to be able to prevent: ‘things made to happen by men’ (genomena ex anthrôpôn) that have become ‘fading [or extinct] with time’, tôi khrônon exitêla.30 Yet the very impossibility of the recovery of these remote events reveals an essential aspect of Herodotus’ historiê, its inherently dialogic nature. The search for the aitio of human behaviour generates new human behaviour in the form of language: opinions that answer the histor’s question, responding to each other, contradicting each other, either rejected or accepted by the discriminating investigator. Historî, in other words, takes the diaphorê ‘difference, conflict’ of the historical process to a new, self-conscious diaphorê between two positions.

The beginning of the essential aspect of Herodotus’ historiê follows points. ‘Let anyone at 2.123.1, ‘do what he wants to do. If I myself stick to the story, I write what I heard but not what I added’. The closure is prompted by the signing of the peace treaty in the war with Xerxes (2.133.1). With this message’, he continues, Argos went to Sousa. ‘We will not say with any opinion (gnômêin . . . afêlos) what one expressed by the other, or project a few lines later.

’Εγώ δὲ ὅφειλα λέγειν
(καὶ μὲν τὸ τάξις τὸ ἔξω)

I am bound to report, even if not at all bound to the original, the whole of my analysis.

In light of these statements anthrôpôn from the Proem, ‘things made to happen by men’ includes things said. This forum for the work of the historian is in the nature of the historiê itself as the search for the aitio of Herodotus’ historiê, for the context. In investi gation, responsibility for things the aitio becomes aitios diaphorê in the next sections how a situation between the reser...
process to a new, semantic, level, since it creates the space for a *diaforē* between two or more *logoi*, always including the *histōr*’s own.

The beginning of the narrative merely puts in practice this essential aspect of Herodotus’ method. Later on he will explain at various points, ‘Let anyone to whom such things are credible’, he says at 2.123.1, ‘do what they want to do with what the Egyptians say; I myself stick to the principle that underlies all of my account: I write what I heard being said by either party.’ An even fuller disclosure is prompted by the controversial subject of the role of Argos in the war with Xerxes: ‘Whether Xerxes sent a herald to Argos with this message’, he says (7.152.1), ‘and whether messengers from Argos went to Sousa to interrogate Artaxerxes about their friendship I cannot say with certainty (οὐκ... αἴτερεῖσο), nor do I express an opinion (καὶ μοι τούτο τὸ ἐποίηκεν εἰς τὸν ἔργον)’[10] on these matters other than the one expressed by the Argives themselves’. These words are complemented a few lines later with the following declaration:[11]

> ἔγω δὲ ὅφειλον λέγειν τὰ λεγόμενα, πείθονται γε μὲν οὐ παντότασιν ὅφειλον
> (καὶ μοι τούτο τὸ ἐποίηκεν εἰς τὸν ἔργον). (7.152.3)

I am bound to record [lit. ‘say’, λέγειν] what is being said, but I am not at all bound to believe it—and this word (ἐποίηκεν) will hold true for the whole of my account.

In light of these statements of method, the phrase *ta genomena ex anthropōn* from the Proem acquires a new and essential meaning: ‘things made to happen by men’ is not limited to things done, but includes things said. *Historiē* as conducted by Herodotus provides a forum for the works *and* the words of the past. Conflict, difference, is in the nature of the object of Herodotus’ *historiē*, which presents itself as the search for an *aitiē* of a difference; but it is also the *product* of Herodotus’ *historiē*, in the conflicting *logoi* for which *historiē* provides the context. In investigating the causes of the conflict, the *histōr* becomes responsible for what his project purports to investigate: he becomes *aitiōs diaforēs* ‘responsible for difference’. We shall see in the next sections how a study of *apodeixis* complements this deep connection between the researcher and the characters of the story he tells.

---

[10] This negative phrase is significant in light of the formula γνώμην ἀποδέξασθαι (rather than ἀπορθαίον) see note 47 below.

[11] On this passage, see Jacoby (1913) 408–9. See also 3.3.1; 3.9.2. See also Cartledge and Greenwood, this volume (Ch. 15, p. 356).
Apodeixis: Proof in Context

In his discussion of the size of Egypt, Herodotus criticizes the erroneous ideas of the Ionians. The argumentation requires him to use three times the verb *apodeixinunai*.

If we want to accept what the Ionians maintain about Egypt (who hold that Egypt is only the Delta [. . .]), then we would be proving (*apodeixinunai av *) that at some point the Egyptians did not have a country at all. (2.15.1)

So if my reasoning about these matters is correct, the Ionians have false ideas about Egypt. But suppose the opinion of the Ionians is right: then I am proving (*apodeixinunai*) that the Greeks and the Ionians themselves do not know how to count. (2.16.1)

My claim that the extent of Egypt is such as I am proving in my present discourse (*apodeixinunai to lógoσ*) is also confirmed by an oracle of Ammon about which I learned after my own opinion (*ποσ έμφανον γνόμην*) about Egypt was formed. (2.18.1)

This is of course the world of demonstration and proof that Thomas highlights. It is, however, important to note that *apodeixinunai* is not merely a matter of ‘proof’, but also the act of proving something, as a response to a specific situation. In the first two instances, this situation is given in a conditional clause in which the Ionians’ opinion is expressed, hypothetically. In the first example, the idea that Egypt is only the Delta is shown to be invalid, since it amounts to a manifestly absurd claim. The act of *apodeixinunai* is not performed for its own sake, but is invoked, as the inevitable consequence of a false belief. Likewise, in the second example, Herodotus’ ‘proof’ that the Greeks cannot count is conditioned by a specific context. Without that context, the act of proving would not have taken place. Similarly, in the last passage, Herodotus’ demonstration of the size of Egypt is prompted by the Greeks’ ignorance. In another geographical passage, the proof required by a given claim cannot take place, supposedly due to lacking or insufficient *historiē*.

τόν δ’ Ὠκεανὸν ἐλέγον μέν λέγουσιν ἀπὸ ἡλίου ἀνατολέως ἀρξάμενον γῆν περί πίσιν πέτων, ἐργα δὲ οὕκ ἄποδεικνύομαι. (4.8.2)

They say, the Greeks, in their account that Oceanus, starting from the East, is flowing all around the world, but they do not prove this with hard fact.

---

13 E.g., ἀπο-διδομένι ‘give due’, ῥετορικά; ἀπο-λαμβάνον (p. 16 above).

The mutual expectancy between proof and context is here a matter of the polar contrast between λογὸς and ἐργῦς, which is underscored by the use of μεν...δε: proof is required and anticipated, but does not follow.

The notion of context remains equally important also when we leave the agonistic sphere of proof and opposing claims: each and every instance of the verbal idea apo-deiκ- in the Histories is an act that is performed as a response to a specific situation. The shepherd, in the story of Cyrus' birth, who says he is ready to 'show' (ἀποδείκνυσι, 1.113.2; cf. 1.110.3) the body of the infant does so at a specific request: he has to prove to Harpagos that the newborn prince is dead in order to avoid severe punishment; the Persians who 'show' (ἀποδείκνυσι, 1.136.1) their children do so for a specific purpose: special gifts are promised by the king for the man who has the most numerous offspring; the Egyptians who 'showed' the body of their father (2.136.2) did so as part of a well-defined transaction: as borrowers they were required by law to provide a security to the lender; the army division that was required to 'bring' (ἀποδεικνύω, 8.35.2) the treasures of Delphi to Xerxes acted on specific military orders.

This contextualization of the act of 'deixis' is due to the force of the preverb; on account of its meaning 'back again' (LSJ D.4), apo- can lend a supplementary contextual dimension to the basic meaning of a verb. In the case of verbs denoting speech, the addition of apo- turns the sensibility to context into an immediately dialogic sense: apo-logeomai 'speak in return', 'defend oneself against', apo-krisomai 'reason in return', 'answer'. In a recent study of apo-phthrograma as a 'performance of wisdom', Joseph Russo has aptly formulated this as 'the sense of giving back an utterance particularly called forth by the social context operating upon the speakers'.

At this point it may be useful to change the preverb and turn for a moment to ἐπί-deiκ. Herodotus' usage clearly shows that far from being synonyms, the two verbs have very specific and different meanings. When Candaules' wife says to Gyges that her husband has 'shown her naked' (ἐνε ἐπεδεκtau γυμνῆν, 1.11.5), she means the gratuitous display of her body, uncalled for and not in response to any

---

11 E.g., ἀπο-δίδωμι 'give back what is expected'; ἀπο-καθίσταμι 'return what is due'; ἀπο-λαμβάνω 'receive what is one's due', ἀπο-ατέω 'demand back' (p. 18 above).

previous request. When Croesus' servants 'show' (epideiksunan, 1.30.1) Solon the king's vast treasuries, the unnecessary display fails to impress the king's guest and so misses its point. The action noun epideixis occurs once, in the sense of 'surprising spectacle', used for the he-goat that mounted a woman in full view of everybody (2.46.4). On account of the meaning of epi- ('besides', 'in addition to') the act of epi-deiknumai may create a certain distance between the display and its witnesses: the spectacle is an addition to a given context, or its witnesses are external spectators of the display.

The examples of epi-deik and apo-deik reveal a further difference, which will prove important for the meaning of apodexis in the Proem. The object of epideixis is always shown as is; it existed before it was shown or displayed and is not changed or modified by it. Zeus shows his face to Heracles (2.42.2) or Atossa her breast to Democedes (3.135.2) in acts of epideixis that leave the objects shown unaffected. What is 'shown' in an act denoted by apo-deik, by contrast, is always changed in the act, and may not even have existed before. The person or thing pointed at in an act of apodeiknuvai acquires a new function according to the requirements of the context. Apodeiknuvai is 'proving' that the person or thing 'pointed at' is different from what he or she was before; thus the verb frequently means 'assign a specific function', 'appoint', and Herodotus expresses the healing of Darius' foot by Democedes as 'he proved him to be healthy' (hugia eis konta apodeixe, 3.130.3; cf. 3.134.1).

The examples of apo-deik shown thus far are all in the active voice. They display semantic features that are relevant for our purpose, but we move closer to the meaning of apodexis in the Proem when we turn to the instances where apo-deik is used in the middle voice. We will see that the middle voice, in accordance with its basic meaning, stresses the involvement of the subject in the act, which yields the idea of personal achievement as an important feature of the semantics of apodexis.

The dialogic 'giving' in the sense of the preverb prokeimnuvai is also brought into practice one's opinion. Herodotus for situations of narrative. The act of apodexis is a representation of an opinion and a contribution to an opinion. It is pointed out not as a separate gnōmē or with the fact, it may be in one's particular context. For example, that the Persians were concealing the Persians alone, 'indirectly' represents a view that is opposed to them (prokeimnuvai gnōmē, 1.20.1). In favour of invading Greece, Herodotus presents an opinion against them (prokeimnuvai, 7.10.1).

When Herodotus' opinion is the subject of conflict and the subject of the opinion is the war with Xerxes, forth a view (gnōmē, 7.139.1)

Ἐνθαῦτα ἀναγκαῖα ἡ πλείουν ἐνθρούσον,

At this point I cannot refer to the majority of the fact, I will not with

1 Other examples: 1.174.1; 1.179.2; 4.97.2; 5.82.5; 5.137.3; 6.4; 7.46.1; 7.99.3; 8.68a1; 8.157.1; 8.157.2; 8.260.5; 3.71.1; 7.882; 7.884; 7.949; and the supposedly synonymous 2.120.2; 3.71.1; 7.882; 7.949; neutral, and does not conform.
Recording Accomplishment

The dialogic ‘giving back’ to a context, which, as we saw, is the sense of the preverb ρο-, is central in the important Herodotean phrase αποδεικνύσθαι την γνώμην which I will translate as ‘perform/put into practice one’s opinion’. This expression is used frequently by Herodotus for situations of speech and decision-making in his narrative. The act of αποδεικνύσθαι is not simply the expression or presentation of an opinion or a belief tout court, but a constructive contribution to an evolving communicative reality. The γνώμη is pointed out not as a display for its own sake, but in response to other γνώμαι or with the intention of shaping subsequent ones. In fact, it may be in overt conflict with other views presented in the particular context. For example, when all of Cyrus’ advisers suggest that the Persians await the attack of the army of Queen Tomyris, Croesus alone, ‘finding fault’ (mensphomainos) with this advice, presents a view that is opposed to the opinion at hand (αποδεικνύσθαι εναντίον της prokeimenē γνώμην, 1.207.1); similarly, when Mardonios has spoken in favour of invading Greece, no one of the Persians present dares ‘present an opinion against the one at hand’ (γνώμην αποδεικνύσθαι αντιεν της prokeimenē, 7.10.1). 42

When Herodotus’ own γνώμη is the object of the verb αποδεικνύσθαι, the sense of conflict and difference of opinion is equally strong: on the subject of the importance of the contribution of the Athenians to the war with Xerxes, Herodotus says that he is obliged to put forth a view (γνώμην αποδεικνύσθαι) that will not please everybody:

Ἐνθαῦτα ἀναγκαίη ἔξεργος γνώμην ἀποδεικνύσθαι ἐπὶ θεσθον καὶ πρὸς τῶν πλείουν ἐνθράπον, ὡμοῖς δὲ, τῇ γέ μοι φαίνεται εἶναι ἀληθῆς, οὐκ ἐπισχῆσον. (7.139.1)

At this point I cannot but put forth an opinion which in fact is odious to the majority; still, in so far as it seems to me a matter of true fact, I will not withhold it.

42 Other examples: 1.170.1; 1.171.1; 1.207.1 (mensphomenos); 3.74.4; 3.81.3; 3.160.1; 4.97.2; 4.98.2; 4.137.3; 6.41.3; 6.42.3; 7.3.1; 7.6.5; 7.10.1 (ἐναντίον τῆς prokeimenē); 7.46.1; 7.99.3; 8.68a1; 8.108.2 (ἐναντίον); 9.58.3 (disapproval: δειλοτάτῳ). Notice that the supposedly synonymous phrase ἀποφαίνομαι τὴν γνώμην (e.g., 1.40; 1.207.2; 2.120.5; 3.71.1; 7.882; 7.52.1; 7.143.3; 7.152.1; 8.49.1; 9.5.2) appears to be more neutral, and does not convey the same sense of controversy and conflict (the underlined examples represent Herodotus’ own opinion; see also note 40 above).
Without the Athenians, Greece would surely have fallen into Persian hands, despite the apodexis of megala erga on the part of the Spartans. The mysterious behaviour of the Nile yields another characteristic moment:

Ει δι δει μεγάλων γνώμης τάς προκειμένας αὐτόν περὶ τῶν ἀφονέόν γνώμην ἀποδείξασθαι, φράσσω δι’ ὦ τι μοι δικεῖτι πληθύνεσθαι ὁ Νεῖλος τοῦ θέρεσιν
(2.24.1)

If I must, after criticizing the theories mentioned, put forth a view myself about things invisible, I will say what is to my mind the cause of the flooding of the Nile in the summer.

Herodotus’ personal gnōmē is here obviously part of his historiē of a controversial topic, a matter of scientific proof and argument, but again we observe that Herodotus’ own practice is similar to that of characters in his tale outside scientific contexts. The apodexis of historiē apparently has something in common with the apodexis of a gnōmē, with counselling and deliberation. Both deal with difference.

It has something in common also with an equally important type of behaviour in the historical process. The verb apodeiktusthai is frequently combined, as early as the Proem, as we saw, with the standard phrase erga megala, yielding a formula that denotes a key concept in Herodotus’ thought and work. The use of apodeiktusthai erga megala is especially frequent in Book Two, where the record of achievement of the Egyptians and their kings is being reviewed, but it remains common throughout the Histories. In the Battle of Salamis, the Aeginetans, for example, are said to have ‘performed noteworthy deeds’ (erga apedexanto logou axia, 8.91); and in the Battle of Plataea ‘by far the best’ (aristos makrai) on the Greek side was Aristodemus, the sole survivor of the three hundred Spartiates who had died earlier at Thermopylae, who wanted to make up for this dishonour: desiring to die a most glorious death, he, left the ranks in his battle rage and wrought great deeds’ (lussanta te kai ekteleponta iēn taxin erga apedexasthai megala, 9.71.3).

The idea of ‘achievement’ expressed with erga megala apodeixasthai is so central to the meaning of apo-deik that even without any object

the verb continues to

In the Battle of Plataea the army ‘fled without accomplishing’ (apotexato kharion, 9.67). The nature of the achievement with a more specific context. The two notable works of irrigation that she ‘accomplished in visiting’ (apedexato khrion, 9.67). The direct relevance of historiē apodexis in the account of the four other acts of the Histories are used to ‘establish’ (apotexato khrion) Croesus and the Massagetae and the banquet, which will ‘establish deeds’ (apotexato khrion) to assure Herodotus that the act of apodexis, 2.101.1) existed. The common memorial of a ‘common deliberation’ (apotexato khrion) was built above Lake Boulomois, with the ‘walls and public works of the Greeks; and, finally, later after the defeat of the Persian troops were not responsible (apotexato khrion).

In all these cases it appears that whatever pree-accomplishment’ of their accomplishment.

Those of the Medes at the Battle of Plataea (apotexato khrion) was used to establish a context, but they proceeded to ask with this own historiē, we have seen that the act of apodexis is

48 In the two remaining instances, 2.146.1 and 8.8.3, the context is again conflict between accounts.
49 On the relation between ἵστορια and γνώμη, see also Sauge (1992) 11.
50 See also Edel (1956) 211.
51 On ἐργα μεγάλα (τῆς καὶ ὅμοιος), see Raubitschek (1939).
the verb continues to convey the idea of personal accomplishment. In the Battle of Plataea, for example, the allied troops of the Persian army ‘fled without accomplishing anything’ (οὐτε τι ἀποδεξαμένος εὐφεύγον, 9.67). The nature of the accomplishment can also be expressed with a more specific term substituted for ἐργα μεγαλα: of the remarkable works of irrigation of Queen Semiramis of Assyria we learn that she ‘accomplished dykes all across the plain, very much worth visiting’ (ἀπεδείχτο κῆψαι αὐτὲς τὰ πεδία καὶ εὐπόρους ἀξιοθέτα, 1.184).

The direct relevance of this sense of ἀποδείκ for the interpretation of ἱστορίας ἀποδείκ in the Proem is underscored by the fact that all of the four other actual occurrences of the action noun ἀποδείκ in the Ἱστορίες are used to convey the sense of ‘achievement’ or ‘accomplishment’. Croesus advises Cyrus to cross over to the territory of the Massagetae and lure Queen Tomyris’ army with a sumptuous banquet, which will ‘leave’ to Cyrus’ army the ‘accomplishment of great deeds’ (λείπει τινὰ ἀποδείκ ἐργῶν μεγαλῶν, 1.207.7); Egyptian priests assure Herodotus that ‘no record of achievement’ (οὐδεμίαν ἐργῶν ἀποδείκ, 2.101.1) exists for the remaining kings from the list; the common memorial of the Twelve Kings of Egypt, a labyrinth situated a little above Lake Moebris, surpassed in cost and labour all the ‘walls and public works’ (τεῖχεα τε καὶ ἐργὰ ἀποδείκ, 2.148.2) of the Greeks; and, finally, Mardonius’ assessment of the military situation after the defeat of the Persian fleet at Salamis was that his Persian troops were not responsible for it, and ‘anxious for achievement’ (βούλομενοις ἱππὸς γενεῖτ’ ἀποδείκ, 8.101.2).

In all these cases it is obvious that no accomplishment or achievement whatsoever proceeds the ἀποδείκ. The ἀποδείκ of great deeds is their accomplishment, their enactment, not their display or showing. Those of the Medes and Persians who proved their virtue in the Battle of Plataea (ἀπεδείχθοντο αρετάς, 9.40) did not make a mere display, but they proved their worth in the very situation.30 Before we proceed with asking what this means for the ἀποδείκ of Herodotus’ own ἱστορία, we have to address another question. If the essence of the act of ἀποδείκ is its contextualization and ‘situatedness’, as was

30 Cf. 1.176.1; 7.23.3; 7.223.4. There is an instructive difference between 7.24 (ἐξερχόμενοι τοὺς δύναμιν ἀποδείκτυνεσθαι καὶ μνησόμενα λειτουργήσαι) and Thuc. 6.47.1 (ἐκδιέξαντος ἅν τιναν ἀπὸ τὴν Ἀθηναίων κόλπης) (cf. Thuc. 6.31.4): Xerxes wanted to prove his power by leaving a great achievement to posterity (see below), whereas the Athenians merely wanted to display their military force.
suggested above, then what is the context for the *apodexis* of great deeds as we see it throughout the *Histories*? We move in the direction of an answer to this question when we consider another typically Herodotean phrase.

Throughout the *Histories*, Herodotus imparts to the players in the historical process the desire to distinguish themselves in the eyes of posterity, to leave signs by which their existence on earth can be remembered. The typical phrase for this is *mnēmosunos* (*mnēmosuna*) *līpesthai* ‘to leave things (of oneself) to be remembered’. The *mnēmosunos* is usually an artifact or monument, but not necessarily so. Examples of *mnēmosuna* include the waterworks of Queen Nitocris of Babylonia (1.185.1, 186.1), the gigantic statues erected by Sesostris in front of the temple of Hephaestus (2.110.1), the brick pyramid of Asychis (2.136.3), but also the *bon mot* of Dienece the Lacedaemonian belonging to the oral tradition feeding on the Battle of Thermopylae (7.226.2). All of these examples belong to the sphere of *apodexis* *ergon megalon*. The description of the *mnēmosuna* of Queen Nitocris follows closely on that of the achievements of Queen Semiramis for which, as we saw, the verb *apoderxato* is used; the description of Asychis’ pyramid is part of a list of the achievements of this king, rounded off with the phrase *touton men tosaota apodexasthai* ‘this [king], then, is said to have achieved this much’, 2.136.4. The two phrases *apodexasthai* (*erga megalai*) and *mnēmosuna* (*līpesthai*), in fact, are very much in each other’s semantic orbit. The latter can be the direct object of the former (*apodexasthai mnēmosuna*, ‘to have achieved things to be remembered’, 2.101.2, said of the Propylaia of King Moeris), and the two phrases can complement each other in one complex expression (e.g., *ethelon te dunamin apodeiknusthai kai mnēmosuna līpesthai*, ‘wanting to put his power in practice and to leave achievements to be remembered’, 7.24, said of Xerxes and the canal through the Athos Peninsula). 51

Turning now to the question as to the context of the *apodexis* *ergon megalon*, we notice that there is a reciprocity between on the one hand the intentions of the Greeks and barbarians engaged in the making of history and on the other hand the intentions of Herodotus himself in making his *historia*. The desire to leave *mnēmosuna* is mirrored and answered by Herodotus’ wish to record them as *erga megalai* apodekthekentia. In other words, and the context in which this is nothing other than the Herodotus.

We are reminded of the *Iliad*, in particular various moments, e.g.

| μῆ μαν ἀσπονδῇ γε καὶ | ἀλλὰ μέγας ἰές τινες... |

It will certainly not discard libel; no, that will harm the people of the future.

Hector uses a negative way to designate an undesired root *(ιερο) (a morpheme) megalos* (*mega rhexas*): a way of course Herodotus’ *Proem* will aklei. 53

It looks as if Herodotus, becoming more and more heroic achievement, makes the essential difference. For him, great deeds can be glorified through epic poetry and not a lack of *kleos* in the act of achieving a great deed in the past opposes the destruction of the achievements lose their place in the *Proem*. 54 Without proof...

---

51 On *mnēmosuna* *līpesthai* and its connection with *apodeiknusthai*, see also Drexler (1972) 235.

53 Also II, 7.89–91, where men are a sign pointing to 17 and Boedeker (Ch. 5), (197a) 156–6; (197b) 335, 122. Within Herodotus’ not 52. See also Pellicia (1978).

54 This happens in the manner ‘the most beautiful to accomplish (*μεγεδε*) the framework of Herodotus’.
apodekhshenta. In other words, what is recorded wants to be recorded and the context in which the deed is performed and accomplished is nothing other than posterity, more specifically, the Histories of Herodotus.

We are reminded here of the heroic condition as presented by the Iliad, in particular of Hector, who speaks about the future at various moments, e.g.,

\[
\mu \eta \ \mu \nu \ \alpha \sigma \pi \sigma \alpha \delta \iota \nu \ \gamma \varepsilon \ \kappa \iota \ \alpha \kappa \lambda \varepsilon \iota \iota \zeta \alpha \zeta \ \alpha \pi \sigma \lambda \omicron \omicron \omicron \mu \nu.
\]

\[
\alpha \lambda \lambda \alpha \ \mu \gamma \varepsilon \ \rho \iota \xi \zeta \zeta \zeta \iota \ \nu \ \kappa \iota \ \varepsilon \sigma \sigma \omega \mu \nu \iota \iota \iota \iota \omicron \theta \upsilon \eta \iota \iota. \quad (I I . \ 22 . 304 - 5)
\]

It will certainly not be without great effort and great fame that I perish; no, that will happen after I have accomplished a great deed, for people of the future to hear about.

Hector uses a negative compound form of the root kle(ω) (akleios) to designate an undesirable state in the future, and he combines the root (ω)reg (a morphological alternative to (ω)reg in ergon) with mega (mega rheas); a way of speaking that points ahead to the future of Herodotus’ Proem with its intention not to let megala erga become askia.55

It looks as if Herodotus, as the present argument progresses, is becoming more and more dependent on the Homeric conception of heroic achievement. Yet in spite of the reminiscence there is an essential difference. For Hector and the epic tradition that envelops him, great deeds carry their own kloos, perpetuated unproblematically through epic poetry under the authority of the Muse. If there is a lack of kloos in the future, this is due to a hero’s not performing a great deed in the present.56 To this epic scenario, Herodotus opposes the destructive force of time, the substance that makes human achievements lose colour and lustre (the toì khronoi exiêla from the Proem).57 Without proper recording, any great deed, however heroic,

54 Also II, 7.89–91, where he thinks of the tomb of one of his defeated opponents as a sign pointing to the past, Hector’s glorious present; see also Cobet (Ch. 17) and Boedeker (Ch. 5), this volume (p. 389 and p. 99, resp.), as well as Bakker (1997a) 163–6; (1997b) 33. On Herodotus and epic intentions, see also Ernæe (1992) 122. Within Herodotus’ narrative, cf. 6.109.3, 7.220.2.

55 See also Pelliccia (1992) 74 n. 23.

56 This happens in the Histories at 9.72.2, where Callocrates, in truly Homeric manner ‘the most beautiful man in the Greek camp’, died without having been able to accomplish (apodekhsheta) a great deed; ironically, he does get his kloos, in the framework of Herodotus’ apodeixis. On this passage, see also Nagy (1967) 178.

57 On ἐξίηλα, see Moles (1999) sect. 8, who argues that this term creates an
will lose its kleos. But recording is not a matter of merely receiving the report from the past; it takes selection, discrimination, and research. In Herodotus' conception, historiê, with its positive results and the questions which it leaves or raises, has taken over the authority of poetic memory and the Muses. 30

We can now reappreciate the seemingly unnecessary rendering, in indirect discourse, of the stories of reciprocal bride-stealing that the Persian legioi adduce as the aitiê of the conflict between the Greeks and the barbarians. Such mythologizing, the domain of myth, poetic memory, and the Muses, is unable to answer the questions that historiê poses. But historiê remains linked with the Muses as source and safeguard of information. Homer, when faced with the intimidating number (plêthos) of the Greek leaders in the Trojan War (Il. 2.488), uses this moment to confess to his human shortcomings and invoke the Muses to assist him. When Herodotus finds himself confronting a similar problem [i.e., the number of Scythians (plêthos), 4.81.1, see pages 16-17 above], he offers us a sentence that reads as a conscious stylistic evocation of the famous Homeric passage; but he gives us at the same time one of his most characteristic descriptions of historiê as a matter of 'differing logos'. The difference between human shortcomings and divine vision has yielded to a difference between human visions. The intellectual load of discriminating between them is a heavy one, and accordingly apodexis is not only the accomplishment of great deeds, but also their recording, which cannot fail to become a great accomplishment itself, a mega ergon, in the process. 29

Herodotus, Thucydides, and the Making of History

The Herodotus that emerges from the foregoing discussion of historiê and apodexis is neither an oral storyteller nor an accomplished modern scientist. Or rather he is both, using the vocabulary of the latter to revolutionize the choice for contemporaries in Herodotus' hands in the opinion of those who poet his not having him he makes up for it, one to the epic poet, by his

Historiê, then, is not a 'publication' or 'presentation' in the course of the Historiê accomplishment. With the historical reality that is volatile, either in the formations or as a matter of a historical process: the hesiter is an apodexis specifically and significantly, both the 'difference', in the form of history, of which the barbarians is the overarch

But 'difference' is the Herodotus' rendering of historiê is a matter of own problematic subject matter. Our own opinion is overthrown, historiê itself leaves question decision is deferred to the who reads Herodotus and in the past through the act of reading has prevented from to conduct their own possible the apodexis of Herodotus.

In this light we can see which too little attention which modifies historiê narrative, is often treated as a periphrastic pronoun that

30 On 'writing', see also 31 As in the common f...
ter to revolutionize the practice of the former. *Historiē*, the term of choice for contemporary critical research based on autopsy, becomes in Herodotus’ hands a displaced viewing, a critical examination of the opinion of those who have seen. Herodotus shares with the epic poet his not having been on the spot and his not having seen, but he makes up for it, even appropriating an authority that is denied to the epic poet, by adopting the intellectual stance of the day.

*Historiē*, then, is not merely ‘research’, nor is *apodexis* merely its ‘publication’ or ‘presentation’; *apodexis*, as we see it develop in the course of the *Histories*, appears to be, rather, the enactment of an accomplishment. Within the framework of the *Histories* and in the historical reality that it evokes, *historiē* is what makes *apodexis* possible, either in the form of opinions presented by historical personalities or as a matter of accomplishment on the part of agents in the historical process: the great achievements of the past that become an *apodexis* specifically in the context of Herodotus’ *History*. And, significantly, both the opinions and the accomplishments create ‘difference’, in the form of either controversy in debate or conflict in history, of which the *diaphore* between the Greeks and the barbarians is the overarching example.

But ‘difference’ is more than something that is represented within Herodotus’ rendering of the past; as we saw, the very process of *historiē* is a matter of difference as it reveals conflicting accounts of problematic subject matter, not to mention the cases where Herodotus’ own opinion is overly controversial. To the extent that Herodotus’ *historiē* itself leaves questions unanswered or raises problems, the final decision is deferred to the *Histories’* public, then and now. Anyone who reads Herodotus’ work is invited to judge the achievements of the past through the achievement of Herodotus himself, which writing has prevented from becoming ‘faded with time’.60 In being asked to conduct their own *historiē*, Herodotus’ future audiences make possible the *apodexis* of Herodotus himself.

In this light we can consider a final element of the Proem, to which too little attention has been paid: the deictic pronoun *hêde* which modifies *historiēs apodexis*. This pronoun, as it is used in narrative, is often treated, without much overt discussion, as the cataphoric pronoun that points ahead to what follows in the text.61 This

---

60 On ‘writing’, see also the contribution of Rössler (Ch. 4) to this volume.
61 As in the common formula to introduce direct speech ἔλεγεν τάκε ἵππος αὐτῷ ‘spoke as
would imply that Herodotus himself, in the act of writing, is the deictic centre of the Proem: ‘what follows (i.e., what I have before me) is the *historiēs apodeixis* of Herodotus of Halicarnassus’, or ‘the *historiēs apodeixis* of Herodotus of Halicarnassus is as follows’. Such a discourse-internal function of ἥδε, however, does not exhaust the possibilities of this demonstrative; indeed, the cataphoric use of ἥδε is not even its primary function. When used in interactive discourse contexts, the proper locus of this proximal deictic element, ἥδε is typically discourse-external, either marking something as close to the speaker and the hearer, or referring to the discourse itself, even to the speaker himself in the act of uttering it.62

This would mean for the Proem that the deictic centre of *historiēs apodeixis* ἥδε is constituted by the *reader*, who is conceived of as standing before Herodotus’ monumental achievement.63 The deictic orientation of the prologue would then become that of an inscription.64 As is known, dedicatory or funeral inscriptions can refer to themselves as τοῦτο σῆμα or τοῦτο μνήμα ‘this tomb monument here’, locating themselves as close with respect to the passerby, the monument’s reader.65 The passerby, cast by the monument’s inscription in the role of speaker, is made the *origo* of a deictic act that will be performed as long as the monument is standing, and read. Herodotus’ first words thus become an implicit version of the *sphragis* of the corpus of Theognidian writers (the difference is the authenticity of the text).

“These are the words among all humans.”66

If Herodotus’ Proetic orientation understands he had already revealed himself (temporal or otherwise) being on a par with the *mnēma* preserve.67 In speaking, he be no less oriented to a god who famously charmed him and permitted him to pass over for session for all time.68

The understanding of the preceding pages, in fact, the reference to Herodotus and Thucydides by his own deicta which he pretends to oppose, *akoinon* ‘a performance’ (1.22.4). The phrase is not to please an immediate audience, taken as ‘declaration’ by Johnson, *agnosma* means a focus ‘not so much (on) the popular favour’.

62 Thocgn. 22 3 (cf. 20 19.3) ἥδε the *future* of the *Historia*;
63 On Herodotus’ futurum (1989) 598 as well as Raoul, Herodotus is not interested in a supposed hint at 1.22.4, 1
64 Moles (1999) section of Thucydides’ undertaking, which occurs in the a year (Th. 2 103 2, etc.), and earlier, Svenbro (1993) 149–50, focussing on the author’s referring to himself in the third person as a ‘monumental’ way of saying.
65 For this idea, see now Moles (1999), with extensive discussion also of Thucydides 1.21–22 in this connection, and, earlier, Svenbro (1993) 149–50, focussing on the author’s referring to himself in the third person as a ‘monumental’ way of saying.
66 Johnson (1994) 232–3; the term *sphragis* usually means a victory over the Athenian...
pus of Theognidean elegy, which actually cites its readers or listeners (the difference is immaterial) in the act of acknowledging the authenticity of the text before them: ‘And so will every one say: “These are the words (epē) of Theognis of Megara, who is named among all humans”.”

If Herodotus’ Proem is understood along these lines, then its decic-tic orientation underscores what our study of apo-deiak in the Histories had already revealed: the recording of ‘great monuments’ (architectural or otherwise) becomes a great monument itself, an achievement on a par with the megala erga apodekkthenta, whose kleos it intends to preserve. In speaking of apodeixis hēde, then, Herodotus appears to be no less oriented toward the future of his work than is Thucydides, who famously characterizes his own work as a kēma es aet, ‘a possession for all time’.

The understanding of apodeixis that I have proposed in the preceding pages, in fact, may shed light on Thucydides’ supposed reference to Herodotus. The focus of interest is the phrase in which Thucydides describes the kind of ephemeral public utterance to which he pretends to oppose his own durable creation: agōnisma es to parakhēma akrōitoin ‘a performance to be listened to in the immediate present’ (1.22.4). The phrase presumably conveys the idea of the intention to please an immediate, contemporary, audience. Agōnisma is usually taken as ‘declamation’ or as ‘competitively presented lecture’, but a recent survey of the earliest occurrences of the term in fifth-century texts goes in a slightly different direction. According to William Johnson, agōnisma means ‘the accomplishment of a notable act’ with a focus ‘not so much on the intrinsic value of the achievement as (on) the popular favour that it brings’. Under such an understanding,

66 Theogn. 22.3 (cf. 20: τοις δ’ ἔκτισι).
67 On Herodotus’ future-oriented stance, see also Connor (1987) 258, Latteiner (1989) 508 as well as Raadlah, this volume (Ch. 7). For the opposite view that Herodotus is not interested in reaching beyond his immediate audience (Thucydides’ supposed hint at 1.22.4, but see below), see, e.g., Fornara (1971a) 60.
68 Moles (1999) section 4 discusses κτήμα as ‘monument’. The future orientation of Thucydides’ undertaking is also apparent in the aorist verb (Ἑρμης) κατασφυξαι, which occurs in the Proem as well as in the recurrent formula for the end of a year (Th. 2.103.2, etc.); the verb (Thucydides) has written ‘the time of a reader in the future, see Bakker (1997d) 30.
69 Johnson (1994) 232 8; citation p. 233, Johnson notes that in Thucydides the term ἰσόνισσα usually means the glory that results from a notable achievement; the term is used (7.56.2) to represent the Syracusans’ own characterization of their victory over the Athenians.
the term begins to resonate with respect to Herodotus’ *apodexiēs*, and may even be meant to supplant it consciously: the choice of *agōnismo* would subtly present Herodotus’ work as a mere achievement in the present, devoid, unlike Thucydides’ own work, of lasting importance for the future.

However that may be, and whether or not Thucydides’ choice of words betrays an indirect challenge to the monumental aspirations of Herodotus’ work as a competitor for the favour of future audiences, an essential difference between the two remains. Where Thucydides sees his work, polished and authoritative, as a standard for analysing the events of the future, which will always be comparable given the constancy of human nature (*kata to anthropōpinon*, 1.22.4), Herodotus, more involved in the actual process of *historiē* and intent on *showing it in practice*, asks his future audiences to be more involved as well. Far from pleasing the crowd in an immediate present, Herodotus’ *apodexiēs*, as we have seen, does not shun controversy, and looks ahead to the audience of the future. In reading the inscription on his monument, we not only become, implicitly, speakers who acknowledge Herodotus’ achievement; we are also cast in Herodotus’ own role. Standing not before the publication or presentation of the Inquiry, but before the Inquiry *itself*, its enactment, we are asked to do what Herodotus did himself: to listen critically, to question, and to judge. We are also asked to do what Herodotus did with the monuments and *megala erga* he encountered: to record. The present volume is among the many proofs that Herodotus achieved what he aspired to.

**HE**

Most older scholars, Persian-war and contemporaries, see Herodotus’ presence or *archeia* as an ancient tradition that is the foundation of which allegedly paid in the then-arguably largely Athenian-Argive (in sympathy) and its notion of ‘Periclean’ appeal; and Herodotus attacked some of these. The question involves all of these.

Modern critics see writers’ beliefs. Notwithstanding authors, Herodotus paid special attention to& the text: he repeated in the text of Herodotus’ work not...
